Objective/Aim :

This project aims at developing a website named Game Critics which would cater to the needs of game addicts all across the world. Our website can be used to directly download games by logging in and purchasing the game directly without any popup ads or directing to other pages. The website is easy to access.

Innovativeness & Usefulness :

This website is very useful as the people can download games without any errors or restrictions. It is totally secure and safe providing fast downloading. The webpages are distributed in different categories like action and adventure , strategy , fighting , etc.

The games are also divided in different styles like top paid, trending, etc. In this manner, the people can come to know that which game is trending nowadays and download them easily. There is also a contact page to help users contact with the webpage makers and add games of their demand.

There is another page showing coupon code which shows discounts on limited categories of games. The redeem option enables the user to get a discount on different games.

Attractive Webpages & Tags Used:

As the whole project is made using HTML , Javascript and CSS , there are many webpages made which are very attractive.They are as follows:

- Staring from the first page,there is a picture slideshow which is made by the help of many tags like span , window.onclick , function in script tag , etc. The login page is also made very attractive using form tag.
- After logging in, on the next webpage on the top is a very good looking list which includes options like android games, contact us , coupon code,etc. is made by using list tag including CSS within it.
- After clicking the categories button, a new webpage appears which includes different categories of games like action and adventure , strategy , multiplayer games , etc. This is made by using button tag with attributes like active , hover , onclick , onload , etc. Many columns are made using style tag which makes the page look way more stylish.
- The script tag is also used many times for a function to work and make a program run within a page and make it look more efficient.

price : 30\$

God Of War (2018)

size : 4.8GB

Tomb Rider

Conclusion :

In the end , talking about the project , overall , is made to download the games easily and safely. The HTML tags used makes the webpages look more efficient and attractive. As their is increasing demand of games in the market, it is a better way to sell games online.

Thank You!
